

# Inaccurate Counting Machines Cannot Determine the Real Election Winners

By Felix P. Muga II, Ph.D.

Senior Fellow, Center for People Empowerment in Governance (CenPEG)

Associate Professor, Mathematics Department, Ateneo de Manila University (ADMU)

Chair, Mathematical Sciences Division, National Research Council of the Philippines (NRCP)

The mock election to demonstrate the accuracy of the SMARTMATIC-provided PCOS Machines was conducted on July 24 and July 25, 2012 at the House of Representative.

Two hundred and thirteen (**213**) votes out of **8,295** votes that were counted by the PCOS Machine differed from the count conducted by the Manual Audit on each of the candidates of the audited elected positions.

The difference that amounts to **213 votes** resulted in an error rating of **2.56781%** or an accuracy rating of **97.43219%**.

Let us consider the implication of the error rating of the PCOS Machine on some of the results of the May 2010 Congressional elections.

1. In the May 2010 Congressional election in the Lone District of Biliran of Eastern Visayas, the total number of votes counted by the PCOS Machines including the invalid votes was **82,127**.

Since the PCOS Machines have an error rating of **2.56781%**, it follows that about **2,109 votes** for the Congressional election of Biliran Province were miscounted by the PCOS Machine.

The winning candidate in the Congressional District of Biliran had **40,010 votes** and his losing rival had **39,649 votes**. This means that the winning margin is only **361 votes**.

Hence, we could not really determine the real winner in the Lone District of Biliran since the PCOS Machines miscounted **2,109 votes** and the proclaimed candidate led his rival by only **361 votes**.

**A 100% manual recount must be conducted to determine the real winner.** Actually, the result of the election of Lone Congressional District of Biliran is under protest in the House of Representatives Electoral Tribunal.

2. In the May 2010 Congressional election in the 1st District of Makati of the National Capital Region, the total number of votes counted by the PCOS Machines including the invalid votes was **136,177**.

Since the PCOS Machines have an error rating of **2.56781%**, it follows that about **3,497 votes** for the Congressional Election of the 1<sup>st</sup> District of Makati were miscounted by the PCOS Machine.

The winning candidate in the 1st Congressional District of Makati had **42,102 votes** and her closest losing rival had **41,860 votes**. This means that the winning margin is only **242 votes**.

Hence, we could not really determine the real winner in the 1<sup>st</sup> District of Makati since the PCOS Machines miscounted **3,497 votes** and the proclaimed candidate led her rival by only **242 votes**.

**A 100% manual recount must be conducted to determine the real winner.** Actually, the result of the election of the 1<sup>st</sup> Congressional District of Makati is under protest in the House of Representatives Electoral Tribunal.

3. In the May 2010 Congressional election in the 6th District of Manila of the National Capital Region, the total number of votes counted by the PCOS Machines including the invalid votes was **108,154**.

Since the PCOS Machines have an error rating of **2.56781%**, it follows that about **2,777 votes** for the Congressional Election of the 6th District of Manila were miscounted by the PCOS Machine.

The winning candidate in the 6th Congressional District of Manila had **39,985 votes** and the closest losing rival had **38,113 votes**. This means that the winning margin is only **1,872 votes**.

Hence, we could not really determine the real winner in the 6th District of Manila since the PCOS Machines miscounted **2,777 votes** and the proclaimed candidate led the rival by only **1,872 votes**.

**A 100% manual recount must be conducted to determine the real winner.** Actually, the result of the election of the 6<sup>th</sup> Congressional District of Manila is under protest in the House of Representatives Electoral Tribunal.

4. In the May 2010 Congressional election in the 1st District of Lanao del Sur of ARMM, the total number of votes counted by the PCOS Machines was **167,643**.

Since the PCOS Machines have an error rating of **2.56781%**, it follows that about **4,305 votes** for the Congressional Election of the 1st District of Lanao del Sur were miscounted by the PCOS Machine.

The winning candidate in the 6th Congressional District of Lanao del Sur had **66,765 votes** and the closest losing rival had **65,489 votes**. This means that the winning margin is only **1,276 votes**.

Hence, we could not really determine the real winner in the 1st District of Lanao del Sur since the PCOS Machines miscounted **4,305 votes** and the proclaimed candidate led the rival by only **1,276 votes**.

**A 100% manual recount must be conducted to determine the real winner.**

5. In the May 2010 Congressional election in the Lone District of ABRA of CAR, the total number of votes counted by the PCOS Machines was **119,651**.

Since the PCOS Machines have an error rating of **2.56781%**, it follows that about **3,072 votes** for the Congressional Election of the Lone District of Abra were miscounted by the PCOS Machine.

The winning candidate in the Lone Congressional District of Abra had **46,536 votes** and the closest losing rival had **45,454 votes**. This means that the winning margin is only **1,082 votes**.

Hence, we could not really determine the real winner in the Lone District of Abra since the PCOS Machines miscounted **3,072 votes** and the proclaimed candidate led the rival by only **1,082 votes**.

**A 100% manual recount must be conducted to determine the real winner.** Actually, the result of the election of the Lone Congressional District of Abra is under protest in the House of Representatives Electoral Tribunal.

6. In the May2010 Congressional election in the Lone District of MOUNTAIN PROVINCE of CAR, the total number of votes counted by the PCOS Machines was **74,791**.

Since the PCOS Machines have an error rating of **2.56781%**, it follows that about **1,920 votes** for the Congressional Election of the Lone District of MOUNTAIN PROVINCE were miscounted by the PCOS Machine.

The winning candidate in the Lone Congressional District of MOUNTAIN PROVINCE had **24,724 votes** and the closest losing rival had **23,973 votes**. This means that the winning margin is only **751 votes**.

Hence, we could not really determine the real winner in the Lone District of MOUNTAIN PROVINCE since the PCOS Machines miscounted **1,920 votes** and the proclaimed candidate led the rival by only **751 votes**.

**A 100% manual recount must be conducted to determine the real winner.** Actually, the result of the election of the Lone Congressional District of MOUNTAIN PROVINCE is under protest in the House of Representatives Electoral Tribunal.

7. In the May2010 Congressional election in the 2<sup>nd</sup> District of SURIGAO DEL NORTE of CARAGA, the total number of votes counted by the PCOS Machines was **172,593**.

Since the PCOS Machines have an error rating of **2.56781%**, it follows that about **4,432 votes** for the Congressional Election of the 2<sup>nd</sup> District of SURIGAO DEL NORTE were miscounted by the PCOS Machine.

The winning candidate in the 2<sup>nd</sup> District of SURIGAO DEL NORTE had **83,912 votes** and the closest losing rival had **81,207 votes**. This means that the winning margin is only **2,705 votes**.

Hence, we could not really determine the real winner in the 2<sup>nd</sup> District of SURIGAO DEL NORTE since the PCOS Machines miscounted **4,432 votes** and the proclaimed candidate led the rival by only **2,705 votes**.

**A 100% manual recount must be conducted to determine the real winner.**

8. In the May2010 Congressional election in the Lone District of BATANES of CAGAYAN VALLEY, the total number of votes counted by the PCOS Machines was **8,473**.

Since the PCOS Machines have an error rating of **2.56781%**, it follows that about **218 votes** for the Congressional Election of the Lone District of BATANES were miscounted by the PCOS Machine.

The winning candidate in the Lone District of BATANES had **3,076 votes** and the closest losing rival had **2,988 votes**. This means that the winning margin is only **88 votes**.

Hence, we could not really determine the real winner in the Lone District of BATANES since the PCOS Machines miscounted **218 votes** and the proclaimed candidate led the rival by only **88 votes**.

**A 100% manual recount must be conducted to determine the real winner.**

9. In the May2010 Congressional election in the 2<sup>nd</sup>District of ISABELA of CAGAYAN VALLEY, the total number of votes counted by the PCOS Machines was **159,592**.

Since the PCOS Machines have an error rating of **2.56781%**, it follows that about **4,098 votes** for the Congressional Election of the 2<sup>nd</sup>District of ISABELA were miscounted by the PCOS Machine.

The winning candidate in the 2<sup>nd</sup>District of ISABELA had **75,045 votes** and the closest losing rival had **72,207 votes**. This means that the winning margin is only **2,838 votes**.

Hence, we could not really determine the real winner in the 2<sup>nd</sup>District of ISABELA since the PCOS Machines miscounted **4,098 votes** and the proclaimed candidate led the rival by only **2,838 votes**.

**A 100% manual recount must be conducted to determine the real winner.** Actually, the result of the election of 2<sup>nd</sup> District of ISABELA is under protest in the House of Representatives Electoral Tribunal.

**10.** In the May2010 Congressional election in the 1<sup>st</sup> District of BATAAN of CENTRAL LUZON, the total number of votes counted by the PCOS Machines was **163,094**.

Since the PCOS Machines have an error rating of **2.56781%**, it follows that about **4,188 votes** for the Congressional Election of the 1<sup>st</sup> District of BATAAN were miscounted by the PCOS Machine.

The winning candidate in the 1<sup>st</sup> District of BATAAN had **80,400 votes** and the closest losing rival had **76,428 votes**. This means that the winning margin is only **3,972 votes**.

Hence, we could not really determine the real winner in the 1<sup>st</sup> District of BATAAN since the PCOS Machines miscounted **4,188 votes** and the proclaimed candidate led the rival by **3,972 votes**.

**A 100% manual recount must be conducted to determine the real winner.** Actually, the result of the election of 1<sup>st</sup> District of BATAAN is under protest in the House of Representatives Electoral Tribunal.

**11.** The PCOS Counting Error is significant if it is larger than the winning margin. It is negligible if the winning margin is twice as large the PCOS Counting Error.

However, it is still significant if the winning margin is less than twice as large as the PCOS Counting Error.

For example, if the Candidate A has 100 votes and Candidate B has 95 votes. If the PCOS miscounts 3 votes, then it is possible that the actual votes of Candidate A is  $100 - 3 = 97$  votes and that of Candidate B is  $95 + 3 = 98$  votes.

The following table lists the Congressional elections where the PCOS MISCOUNT is still significant.

	PROVINCE/CITY	DISTRICT	REGION	PCOS MISCOUNT	WINNING MARGIN
<b>11</b>	<b>BATANGAS</b>	<b>3RD</b>	<b>IV-A</b>	<b>6,845</b>	<b>6,863</b>
<b>12</b>	<b>MARINDUQUE</b>	<b>LONE</b>	<b>IV-B</b>	<b>2,671</b>	<b>4,107</b>
